

# Contents

1.	Some Basic Results in Probability and Statistics . . . . .	1
1.1	Summation and Product Operators, 1	
1.2	Probability, 2	
1.3	Random Variables, 3	
1.4	Normal Probability Distribution and Related Distributions, 6	
1.5	Statistical Estimation, 8	
1.6	Inferences about Population Mean—Normal Population, 9	
1.7	Comparisons of Two Population Means—Normal Populations, 12	
1.8	Inferences about Population Variance—Normal Population, 14	
1.9	Comparisons of Two Population Variances—Normal Populations, 16	

## Part I

### BASIC REGRESSION ANALYSIS

2.	Linear Regression with One Independent Variable. . . . .	21
2.1	Relations between Variables, 21	
2.2	Regression Models and Their Uses, 25	
2.3	Regression Model with Distribution of Error Terms Unspecified, 30	
2.4	Estimation of Regression Function, 34	
2.5	Estimation of Error Terms Variance $\sigma^2$ , 44	
2.6	Normal Error Regression Model, 47	
2.7	Computer Inputs and Outputs, 49	

3.	Inferences in Regression Analysis. . . . .	53
3.1	Inferences Concerning $f_{ji}$	53
3.2	Inferences Concerning $J_0$	61
3.3	Some Considerations on Making Inferences Concerning $J_0$ and $J_1$	63
3.4	Interval Estimation of $E(Y_i)$	65
3.5	Prediction of New Observation	69
3.6	Considerations in Applying Regression Analysis	75
3.7	Case When $J_1$ Is Random	76
3.8	Analysis of Variance Approach to Regression Analysis	77
3.9	Descriptive Measures of Association between $X$ and $Y$ in Regression Model	89
3.10	Computer Output	92
4.	<b>Aptness of Model and Remedial Measures.</b> . . . .	<b>97</b>
4.1	Residuals	97
4.2	Graphic Analysis of Residuals	99
4.3	Tests Involving Residuals	111
4.4	$F$ Test for Linearity	113
4.5	Remedial Measures	121
4.6	Transformations to Linearize Regression Function	123
4.7	Variance-Stabilizing Transformations	131
5.	<b>Topics in Regression Analysis—I</b> . . . . .	<b>140</b>
5.1	Joint Estimation of $p_i$ and $J_1$	140
5.2	Confidence Band for Regression Line	149
5.3	Simultaneous Estimation of Mean Responses	152
5.4	Simultaneous Prediction Intervals for New Observations	154
5.5	Regression through the Origin	156
5.6	Comparison of Two Regression Lines	160
5.7	Effect of Measurement Errors	167
5.8	Choice of $X$ Levels	170

**Part II**

**GENERAL REGRESSION AND CORRELATION ANALYSIS**

6.	<b>Matrix Approach to Simple Regression Analysis.</b> . . . .	<b>179</b>
6.1	Matrices	179
6.2	Matrix Addition and Subtraction	184
6.3	Matrix Multiplication	185
6.4	Special Types of Matrices	189
6.5	Linear Dependence and Rank of Matrix	191
6.6	Inverse of a Matrix	192
6.7	Some Basic Theorems for Matrices	197
6.8	Random Vectors and Matrices	197

6.9	Simple Linear Regression Model in Matrix Terms, 200	
6.10	Least Squares Estimation of Regression Parameters, 202	
6.11	Analysis of Variance Results, 205	
6.12	Inferences in Regression Analysis, 206	
<b>7.</b>	<b>Multiple Regression</b>	<b>214</b>
7.1	Multiple Regression Models, 214	
7.2	General Linear Regression Model in Matrix Terms, 225	
7.3	Least Squares Estimators, 226	
7.4	Analysis of Variance Results, 227	
7.5	Inferences about Regression Parameters, 229	
7.6	Inferences about Mean Response, 231	
7.7	Predictions of New Observations, 233	
7.8	An Example—Multiple Regression with Two Independent Variables, 234	
7.9	Problems in the Analysis of Multiple Regression Models, 249	
7.10	Testing Hypotheses for Multiple Regression Models, 259	
7.11	Coefficients of Partial Determination, 265	
7.12	Standardized Regression Coefficients, 267	
<b>8.</b>	<b>Polynomial Regression</b>	<b>273</b>
8.1	Polynomial Regression Models, 273	
8.2	Example 1—One Independent Variable, 278	
8.3	Example 2—Two Independent Variables, 287	
8.4	Estimating the Maximum or Minimum of a Quadratic Regression Function, 291	
8.5	Some Further Comments on Polynomial Regression, 292	
<b>9.</b>	<b>Indicator Variables</b>	<b>297</b>
9.1	One Independent Qualitative Variable, 297	
9.2	Model Containing Interaction Effects, 304	
9.3	More Complex Models, 308	
9.4	Other Uses of Independent Indicator Variables, 313	
9.5	Some Considerations in Using Independent Indicator Variables, 318	
9.6	Dependent Indicator Variable, 320	
9.7	Linear Regression with Dependent Indicator Variable, 324	
9.8	Logistic Response Function, 329	
<b>10.</b>	<b>Topics in Regression Analysis—II</b>	<b>339</b>
10.1	Multicollinearity, 339	

- 10.2 Reparameterization to Improve Computational Accuracy, 347
- 10.3 Autocorrelation, 352

**11. Search for "Best" Set of Independent Variables. . . . . 371**

- 11.1 Nature of Problem, 371
- 11.2 Example, 373
- 11.3 All Possible Regressions, 375
- 11.4 Stepwise Regression, 382
- 11.5 Other Search Procedures, 386
- 11.6 Implementation of Search Procedures, 387

**12. Normal Correlation Models. . . . . 393**

- 12.1 Distinction between Regression and Correlation Models, 393
- 12.2 Bivariate Normal Distribution, 394
- 12.3 Conditional Inferences, 399
- 12.4 Inferences on  $p_{12}$ , 403
- 12.5 Multivariate Normal Distribution, 407

**Part III**

**BASIC ANALYSIS OF VARIANCE**

**13. Single-Factor Analysis of Variance. . . . . 419**

- 13.1 Relation between Regression and Analysis of Variance, 419
- 13.2 Factors, Factor Levels, and Treatments, 422
- 13.3 Uses of Analysis of Variance Models, 424
- 13.4 Model I—Fixed Effects, 425
- 13.5 Estimation of Parameters, 431
- 13.6 Analysis of Variance, 436
- 13.7  $F$  Test for Equality of Factor Level Means, 447
- 13.8 Computer Input and Output, 450
- 13.9 Power of  $F$  Test, 453

**14. Analysis of Factor Effects. . . . . 458**

- 14.1 Decomposition of  $SSTR$ , 459
- 14.2 Estimation of Factor Effects, 465
- 14.3 Tukey Method of Multiple Comparisons, 473
- 14.4 Scheffé Method of Multiple Comparisons, 477
- 14.5 Bonferroni Multiple Comparison Method, 480
- 14.6 Analysis of Factor Effects When Factor Quantitative, 483

**15. Implementation of ANOVA Model. . . . . 492**

- 15.1 Planning of Sample Sizes with Power Approach, 492

- 15.2 Planning of Sample Sizes with Estimation Approach, 498
- 15.3 Planning of Sample Sizes to Find "Best" Treatment, 500
- 15.4 Residual Analysis, 501
- 15.5 Transformations, 506
- 15.6 Tests for Equality of Variances, 509
- 15.7 Effects of Departures from Model, 513

**16. Topics in Analysis of Variance—I . . . . . 518**

- 16.1 Some Alternatives to the *F* Test, 518
- 16.2 ANOVA Model II—Random Effects, 523
- 16.3 Regression Approach to Single-Factor Analysis of Variance, 534

**Part IV**

**MULTIFACTOR ANALYSIS OF VARIANCE**

**17. Two-Factor Analysis of Variance. . . . . 549**

- 17.1 Multifactor Studies, 549
- 17.2 Meaning of Model Elements, 553
- 17.3 Model I (Fixed Effects) for Two-Factor Studies, 567
- 17.4 Analysis of Variance, 569
- 17.5 *F* Tests, 579
- 17.6 Computer Input and Output, 582
- 17.7 Power of *F* Tests, 584

**18. Analysis of Two-Factor Studies. . . . . 588**

- 18.1 Analysis When Both Factors Qualitative, 588
- 18.2 Analysis When One or Both Factors Quantitative, 597
- 18.3 Implementation of Two-Factor ANOVA Model, 601

**19. Topics in Analysis of Variance—II. . . . . 605**

- 19.1 One Observation per Treatment, 605
- 19.2 Unequal Sample Sizes, 612
- 19.3 Models II (Random Effects) and III (Mixed Effects) for Two-Factor Studies, 616
- 19.4 Regression Approach to Two-Factor Analysis of Variance, 627

**20. Multifactor Studies. . . . . 636**

- 20.1 Model I (Fixed Effects) for Three-Factor Studies, 636
- 20.2 Analysis of Variance, 647

- 20.3 Analysis of Factor Effects, 655
- 20.4 Example of Three-Factor Study, 656
- 20.5 Models II and III for Three-Factor Studies, 662

**Part V**

**EXPERIMENTAL DESIGNS**

<b>21. Completely Randomized Designs.</b>	<b>.671</b>
21.1 Elements of Experimental Design,	671
21.2 Contributions of Statistics to Experimentation,	676
21.3 Completely Randomized Designs,	680
<b>22. Analysis of Covariance for Completely Randomized Designs</b>	<b>. 685</b>
22.1 Basic Ideas,	685
22.2 Covariance Model,	689
22.3 Example,	695
22.4 Covariance Analysis as Modification of Analysis of Variance,	703
22.5 Factorial Experiments,	713
22.6 Additional Considerations for the Use of Covariance Analysis,	717
<b>23. Randomized Block Designs.</b>	<b>.722</b>
23.1 Basic Elements,	722
23.2 Model,	726
23.3 Analysis of Variance,	727
23.4 Analysis of Treatment Effects,	730
23.5 Factorial Treatments,	731
23.6 0,1 Responses,	733
23.7 Implementation Considerations,	734
23.8 Random Block Effects,	744
23.9 Repeated Measures Designs,	745
23.10 Generalized Randomized Block Designs,	749
23.11 Use of More Than One Blocking Variable,	752
23.12 Regression Approach to Randomized Block Designs,	753
23.13 Covariance Analysis for Randomized Block Designs,	754
<b>24. Latin Square Designs.</b>	<b>.764</b>
24.1 Basic Elements,	764
24.2 Model,	772
24.3 Analysis of Variance,	777
24.4 Analysis of Treatment Effects,	777
24.5 Factorial Treatments,	778
24.6 Implementation Considerations,	780
24.7 Additional Replications with Latin Square Designs,	784

24.8 Random Blocking Variable Effects, 793  
24.9 Youden and Graeco-Latin Squares, 794  
24.10 Regression Approach to Latin Square Designs, 795

**Appendix Tables.** . . . . . **.803**

**Index.** . . . . . **.837**
