This new revised edition of *Applied Econometrics* is an ideal text for students who are looking for a reliable and practical grounding in the subject. Students are introduced to the various forms of econometric data and how they are formatted in electronic media, and shown how to transfer and use the data in the most popular software packages, including Excel, Microfit and Econometric Views (EViews).

Each chapter begins with a clear theoretical overview followed by a step-by-step approach to using the software. Mathematics has been kept to a minimum but when used is accompanied by helpful explanations.

The book is accompanied by a website: [www.patgrave.com/economics/asteriou/data.htm](http://www.patgrave.com/economics/asteriou/data.htm) that includes all the necessary data files for reproduction of all the econometric work that is carried out throughout the text.

The revised *Applied Econometrics* includes:

- Thorough and clear coverage of modern econometrics in a compact package
- Step-by-step approaches to all econometrics tests and methods of estimation
- Useful guidelines on using popular software packages, including Excel, Microfit and Econometric Views (EViews)
- A large number of computer examples with real-world data and thorough presentation and interpretation of the estimated results
- End of chapter questions and exercises
- Special sections on panel data, including the latest developments in panel unit roots and panel cointegration

**Dimitrios Asteriou** is Senior Lecturer at the Department of Economics of City University of London. He is also the Secretary General of the European Economics and Finance Society,
