Foreword	xvii
Preface	xix

## 1 *The Physical Description of Signals*

**William Morris Hartmann**

I. Introduction	1
II. Simple Harmonic Motion	2
A. RMS Value	4
B. Other Oscillators	5
III. Propagation of Sound	6
A. Energy, Power, and Intensity	7
B. Radiation	8
C. Plane Waves	9
IV. Measurement of Acoustical Strength	10
A. Levels and Pressure	11
B. Absolute dB	12
V. The Spectrum	13
VI. The Fourier Transform	16
A. Real and Complex Functions	16
B. Transforms of Sine and Cosine	17
C. The Delta Function	18

D. Amplitude and Phase Spectra	18
E. The Power Spectra of the Pure Tone and the Spike	19
F. The Lattice Function	20
G. The Convolution Theorem	21
H. Complex Periodic Signals	22
I. The Fourier Series	25
J. Temporal-Spectral Trading	26
VII. Amplitude Modulation	28
A. Balanced Modulation	29
VIII. Frequency Modulation	30
A. Narrowband FM	31
B. Wideband FM	32
IX. Filters	33
A. Frequency Domain	33
B. The Impulse Response	36
C. The One-Pole Low-Pass Filter	38
D. The Two-Pole Low-Pass Filter	39
Reference	40

## 2 *Cochlear Structure and Function*

**Graeme K. Yates**

I. Function and Structure of the Cochlea	41
A. Transduction of Acoustic Stimuli	41
B. Hair Cells and Mechanical-to-Electrical Transduction	42
C. Acoustic Preprocessing	43
D. Structure of the Cochlea	44
E. Active Processes within the Cochlea	45
II. Macromechanics	46
A. Experimental Observations	46
B. The Traveling Wave	49
III. Micromechanics	53
A. OHC Mechanical Activity	53
B. Coupling Energy to the BM	60
C. Localization of the Cochlear Amplifier along the BM	62
IV. Cochlear Nonlinearity	64
A. Sources of Nonlinearity	64
B. Input-Output Functions	67
C. Distortion in the Cochlea	68
D. Otoacoustic Emissions	68
E. Two-Tone Suppression	70

V. Summary	71
References	71

### **3**    *Neural Signal Processing*

**Alan R. Palmer**

I. Sound Frequency	75
A. Frequency Selectivity	75
B. Population Responses to Single Tones	79
C. Cochleotopic Organization	80
D. Frequency–Intensity Response Areas	81
E. Time Course of Activation by Single Tones	83
F. Two-Tone Rate and Synchrony Suppression	86
II. Sound Level	88
A. Rate versus Level Functions to CF Tones	88
B. The Dynamic Range Problem	89
C. Wider Dynamic Range of the Onset Response	90
D. Rate versus Level Functions in the Central Auditory System	90
E. Effect of Background Noise on Rate–Level Functions	92
III. Modulation	93
A. Amplitude Modulation	93
B. Frequency Modulation	98
IV. Speech and Vocalization	99
A. Representation of Speech Signals in the Auditory Nerve	99
B. Representation of Speech Signals in the Central Nervous System	103
V. Cues for Localization	105
A. Interaural Level Differences	105
B. Interaural Phase Differences	106
C. Onset and Ongoing Time Differences	110
D. Pinna Spectral Effects	110
E. Topographical Distribution of Interaural Sensitivities and Spatial Hearing	110
VI. Summary and Concluding Remarks	112
References	113

### **4**    *Loudness Perception and Intensity Coding*

**Christopher J. Plack and Robert P. Carlyon**

I. Introduction	123
II. The Perception of Loudness	124

A. Definition of Loudness	124
B. Loudness Matching	124
C. Loudness Scales	128
D. Models of Loudness	131
E. Other Factors That Affect Loudness	132
III. Parametric Studies of Intensity Discrimination	134
A. Measurement Techniques	134
B. Weber's Law and the Near Miss	134
C. Frequency Effects	135
D. Duration Effects	136
IV. Models of Peripheral Intensity Coding	136
A. The Dynamic Range Problem	137
B. Coding by Spread of Excitation	137
C. Coding by Neural Synchrony	139
D. Models Based on Rate-Intensity Functions	141
E. Intensity Discrimination under Nonsimultaneous Masking	143
V. What Limits Intensity Discrimination?	145
A. Peripheral and Central Limitations	145
B. Memory for Intensity	147
VI. Intensity Discrimination and Loudness	149
A. The Relationship between Intensity Discrimination and Loudness	149
B. Intensity Discrimination in Impaired Ears	150
VII. Detection of Tones in Noise	151
A. The Overshoot Effect	151
B. Intensity-Independent Cues	154
VIII. Summary	155
References	156

## 5 *Frequency Analysis and Masking*

**Brian C. J. Moore**

I. Introduction	161
II. The Power Spectrum Model and the Concept of the Critical Band	162
III. Estimating the Shape of the Auditory Filter	165
A. Psychophysical Tuning Curves	166
B. The Notched-Noise Method	168
C. The Rippled-Noise Method	172
D. Allowing for the Transfer Function of the Outer and Middle Ear	172

E. An Example of Measurement of the Auditory Filter Shape	173
IV. Summary of the Characteristics of the Auditory Filter	175
A. Variation with Center Frequency	175
B. Variation with Level	177
V. Masking Patterns and Excitation Patterns	178
A. Relationship of the Auditory Filter to the Excitation Pattern	180
B. Changes in Excitation Patterns with Level	181
VI. The Additivity of Masking and Excess Masking	185
VII. Phenomena Reflecting the Influence of Auditory Filtering	188
A. The Threshold of Complex Sounds	188
B. Sensitivity to the Relative Phase	189
C. The Audibility of Partial in Complex Tones	192
VIII. Nonsimultaneous Masking	194
IX. Evidence for Lateral Suppression from Nonsimultaneous Masking	196
X. The Enhancement of Frequency Selectivity Revealed in Nonsimultaneous Masking	197
XI. Summary	199
References	200

## 6 *Temporal Integration and Temporal Resolution*

David A. Eddins and David M. Green

I. Introduction	207
II. Temporal Integration	208
A. Classical Theory	208
B. Time-Intensity Trades	211
C. The Presence of Noise	213
D. Recent Theories	216
III. Temporal Acuity	218
A. Introduction	218
B. Temporal Order	218
C. Phase Detection	219
D. Temporal Gap Detection	221
E. Amplitude-Modulation Detection	232
F. Temporal Asynchrony	236
IV. Conclusions	237
A. Temporal Integration	237
B. Temporal Acuity	237
Appendix	238
References	239

## 7 *Across-Channel Processes in Masking*

Joseph W. Hall III, John H. Grose, and Lee Mendoza

I. Introduction	243
II. Profile Analysis	244
III. Modulation Detection or Discrimination Interference	248
IV. Across-Channel Effects Based upon Comodulation	251
A. Comodulation Masking Release	251
B. CMR and Stimulus Complexity	254
C. Monaural Envelope Correlation Perception and CMR	256
D. The Role of Energy in Masker Dips	257
E. Comodulation Detection Differences	258
F. Comodulation and the Perception of Speech	259
V. Concluding Remarks	260
References	261

## 8 *Pitch Perception*

Adrianus J. M. Houtsma

I. Introduction	267
II. Pure Tones	268
A. The Mel Scale	268
B. Dependence on Intensity	269
C. Influence of Partial Masking	270
D. Binaural Diplacusis	271
E. Frequency Discrimination	271
III. Complex Tones	274
A. Historical Background	274
B. Template Theories of Pitch	275
C. The Role of Unresolved Harmonics	277
D. Hybrid Models	278
E. Pitch of Simultaneous Complex Tones	281
F. Pitch Ambiguity	281
IV. Nontonal Pitch	282
A. Repetition Pitch	282
B. Huggins Pitch and Edge Pitch	283
C. Pitch of Amplitude-Modulated Noise	284
V. Pitch Scales: Relative and Absolute	285
A. Relative Pitch	285
B. Pitch Contours in Speech	287
C. Absolute Pitch	287
VI. Multidimensional Aspects of Pitch	289
References	291

## **9** *Spatial Hearing and Related Phenomena*

### **D. Wesley Grantham**

I. Introduction	297
II. Binaural Processing	297
A. Lateralization	298
B. Binaural Detection	303
C. Temporal Effects in Binaural Processing	306
III. Localization and Spatial Resolution in the Free Field	310
A. Localization and Spatial Resolution in the Horizontal Plane	311
B. Localization and Resolution in the Vertical Plane	320
C. Auditory Distance Perception	323
D. Detection and Discrimination of the Motion of Auditory Targets	329
IV. The Precedence Effect	332
A. Background	332
B. The Localization Aspect: Localization of Sounds in Rooms	334
C. Buildup of Echo Suppression	336
D. Cortical Basis for the Precedence Effect	337
V. Conclusions	338
References	339

## **10** *Models of Binaural Interaction*

### **Richard M. Stern and Constantine Trahiotis**

I. Introduction: Cross-Correlation Models of Binaural Perception	347
II. Structure of Binaural Cross-Correlation-Based Models	349
A. The Original Forms of the Cross-Correlation Model	349
B. Colburn's Auditory-Nerve-Based Model	351
C. Physiological Support for Cross-Correlation in the Binaural System	354
D. Temporal Integration of the Coincidence Display	355
III. Extensions of the Cross-Correlation Approach	357
A. Extensions by Stern, Colburn, and Trahiotis	357
B. Extensions by Blauert, Cobben, Lindemann, and Gaik	360
C. Mechanisms for Time-Intensity Interaction and Image Formation	362
IV. Ability of Cross-Correlation Models to Describe Psychoacoustical Data	364
A. Subjective Lateral Position	364

B. Interaural Discrimination Phenomena Related to Subjective Lateral Position	372
C. Binaural Masking-Level Differences	374
D. Dichotic Pitch Phenomena	376
E. Temporal Effects	377
V. Summary and Conclusions	379
References	380

## **11**    *Auditory Grouping*

**C. J. Darwin and R. P. Carlyon**

I. Introduction	387
II. Peripheral Considerations	388
III. Mechanisms of Auditory Grouping	389
IV. Harmonicity	390
A. Detecting Inharmonicity and "Hearing Out" Mistuned Components	391
B. Integration into Pitch Percepts	395
C. Identification of Speech Sounds	396
D. Lateralization	401
E. Summary	402
V. Onset and Offset Asynchrony	403
A. Detecting and Discriminating Onset and Offset Asynchronies	403
B. Order Discrimination	403
C. Timbre Judgments	404
D. Identifying Speech Sounds	404
E. Pitch Perception	406
F. Lateralization	407
VI. Amplitude-Modulation Phase Differences	408
A. Detection of AM Phase Differences	408
B. Grouping by AM Phase Differences	409
C. AM Phase and Onset Asynchrony	411
D. Summary	412
VII. Frequency Modulation	412
A. Detection of Across-Frequency Differences in FM Phase	412
B. Identifying Speech Sounds	413
C. Pitch Perception	414
D. Summary	414
VIII. Lateralization	415
A. Hearing Out a Single Tone	416
B. Pitch Perception	416
C. Identifying Speech Sounds	417

IX. The Nature of Auditory Grouping	417
A. Grouping Is Not All or None	417
B. Understanding Speech in the Absence of Primitive Grouping Cues	419
References	420

## **12** *Timbre Perception and Auditory Object Identification*

**Stephen Handel**

I. Introduction	425
II. Sound Production	427
A. Source–Filter Model	427
B. Acoustic Structure	430
C. Perceptual Consequences	433
III. Experimental Results On Timbre and Object Perception	433
A. Instruments	434
B. Voices	445
C. Natural Events	450
IV. Neuropsychological Evidence	456
V. Concluding Discussion	457
References	459

Index	463
